

## **Input Sought on Future of Arizona Traveler Information System Website**

First step in development of new az511.gov website

PHOENIX – As the Arizona Department of Transportation (ADOT) gets underway with a project to redevelop the 511 Traveler Information System website, input from the public will help guide the process.

A brief, 12-question survey is available online at [azdot.gov](http://azdot.gov) or by visiting [surveymonkey.com/s/ADOT511](https://surveymonkey.com/s/ADOT511).

By reaching out to drivers and users of the current az511.gov site, ADOT hopes to create an outline for a redesigned site that better meets the expectations and needs of travelers around the state. This is the first major revision planned for the az511.gov site since 2010.

The Traveler Information System – both the az511.gov website and the 511 phone line – are designed to provide accurate, up-to-date information for drivers and travelers. The system provides data on crashes, construction-related restrictions, weather, planned closures and other events that impact mobility around Arizona.

Last month, there were nearly 54,000 visits to the az511.gov website. Usage typically spikes during the winter storm season and when summer monsoon storms hit the state.
